

WHAT IS ARDHISASA?

Ardhisasa is an online platform launched by the Government of Kenya to facilitate the processing of land related services. It aims to enhance efficiency and transparency in the management of land transactions. The platform allows users to access various services, including:

1. Land Registration: Applications for land title registration and transfers can be submitted online.
2. Search Services: Users can conduct land searches to verify ownership and details of properties.
3. Land Rates Payment: The platform allows for online payment of land rates and other associated fees.
4. Land Valuation: Users can access valuation services for land and properties.

Ardhisasa is part of the broader initiative to digitize land management in Kenya, making it easier for citizens to interact with land authorities and access services without the need for physical visits to land offices.
